Autumn 2024 – SP2

**Course Assignments  
for  
Advanced Information Visualization and Applications  
4DV806 – Autumn 2024**

Assignment 3

---

**Task 1 *Implementation***

For this assignment you have to *implement* a visualization for a multivariate data set based on your design made for Assignment 2.

Submit a report (3-5 pages, A4, 12pt) with a detailed description and screenshots of your visualization. You should explain:

- How the user is able to perform tasks such as: browsing, highlighting, comparison of entries, etc.
- Differences between your design from Assignment 2 and the final implementation.
- Problems encountered during the implementation stage.
- Advantages and disadvantages of your final visualization.

You will present your solution in a mandatory seminar after the deadline (check Moodle for dates).

---

Prepare a ZIP archive with your implementation and report (PDF) and upload it to Moodle by the given deadline! If you have questions, you can contact the course coordinator via email or use the Moodle discussion forum.

Please note: plagiarism is not acceptable!

Good luck!
